

Your new tattoo has now been cleaned & safely bandaged using a Saniderm Wrap

You can leave the wrap on for 8 to 24 hours

Every tattoo heals differently

the length of time will be dependent upon how much fluid your tattoo leaks.

If it looks extra Juicy™ the wrap will need to be removed sooner ✓

Remove the wrap

in a warm shower; the water will loosen the adhesive.

1

Find an edge

& pull in the direction of your hair growth

Clean your tattoo

with unscented antibacterial soap and warm water.

2

After cleaning, you can use another patch

which can then be left on the tattoo for 3-5 days.

or you can apply a thin layer of A&D ointment and proceed with the following aftercare guidelines:

During the healing process

make sure your new tattoo is kept:

- clean
- slightly moist

& allowed to breath ♥

Wash

the tattooed area twice a day using antibacterial soap and warm water.

Dab or blot the skin gently ✓

After 48 hours

with clean hands, apply an unscented lotion (or the included all natural tattoo balm).

During the healing process

IT MAY BE

✓ red ✓ swollen ✓ bruised ✓ itchy ✓ pealy

Most of the irritation should subside within 3 days to a week.

DO NOT

- ✗ SWIM
 - ✗ SOAK IN A HOT TUB OR BATH
 - ✗ SUN TAN
 - ✗ SCRATCH
- FOR UP TO TWO WEEKS AFTER GETTING YOUR TATTOO

Though it will not always happen, scabbing is a natural part of the healing process. If you experience any scabbing, **DO NOT** pick at the scab. Keep it clean & moisturized & let it fall off naturally ✓

If during the healing process you experience bubbles forming on the surface (not as common but can occur), stop applying any ointments ✗

The moisture can get trapped & lead to possible scabbing; you want your tattoo to dry out. Make sure should wash the tattoo, pat dry it, & let it dry & peel on its own ✓
